

Applied AI Engineer / Software Engineer**7 years Software Development, Technical Support Engineering****8 years Teamwork, Cross-functional Collaboration, Client-facing Relationships*****Professional Profile***

Software engineer with 7 years of WordPress/PHP development and technical support: plugin conflicts, caching layers, and custom code for 1,000+ customers. Builds LLM applications in Python, including a cited RAG assistant over Philippine law with a measured retrieval eval, a chained OpenAI function-calling loop, an MCP server that lets an AI assistant inspect a live WordPress site, and an LLM grading loop in a multi-user quiz tool. Experienced in turning client requirements into deployed solutions and explaining fixes in plain language.

Technology, Methodologies, Tools, Languages

- **Languages & Databases:** Python, PHP, JavaScript, HTML, CSS, MySQL, PostgreSQL.
- **AI/LLM:** OpenAI API (function calling, embeddings), RAG (pgvector, Supabase), RAG evaluation (MRR, nDCG, Recall@K, LLM-as-judge), Groq, Model Context Protocol (MCP), prompt design, Gradio, Claude Code.
- **CMS & Platforms:** Supabase (Postgres, Google OAuth), WordPress Plugin Development, Gravity Forms, WooCommerce, Elementor, Divi, Shopify, Unbounce.
- **Tools & Practices:** Git, ClickUp, REST API Integrations, WP-CLI, Xdebug, Web Scraping (BeautifulSoup), Debugging & Root-Cause Analysis, Production Environment Troubleshooting.

AI & LLM Projects

- **RA 9262 Assistant (RAG):** Built and deployed a retrieval-augmented assistant over the Philippine Anti-VAWC Act and its implementing rules: section-based chunking, OpenAI embeddings searched with pgvector on Supabase, follow-up query rewriting, a hand-verified law-to-rules crosswalk, and code that removes citations to sections the search did not return. Built a 52-question eval (MRR, nDCG, Recall@K, LLM-as-judge): the right section ranks in the top 5 for 42 of 45 answerable questions, and 7 of 7 out-of-scope questions are refused. Deployed on Hugging Face Spaces. (huggingface.co/spaces/mcglenn07/VAWC-RAG)
- **Bar Exam Reviewer Quiz Tool:** Built and deployed a multi-user practice tool for bar exam prep on Supabase (Postgres) with Google OAuth login and per-user score dashboards. An LLM (GPT-OSS 120B via Groq) grades each answer against the reviewer's suggested answer. Ingested thousands of Q&A items from eight scanned reviewer PDFs (about 600 pages each), writing extraction filters for recurring errors such as misplaced question splits and page noise, then cross-checking extracted text against the source pages. In use by a small group of law students preparing for the bar.
- **wp-diagnostics-mcp:** Built and shipped an MCP server exposing 7 WP-CLI-backed diagnostic tools (plugin state, PHP/WP environment info, debug-log tailing, guarded read-only SQL queries, and Gravity Forms error tracking) that let an AI assistant inspect a live WordPress site directly. (github.com/mcglenn07/wp-diagnostics-mcp)
- **Lipad AI:** Built an airline pricing assistant using OpenAI function calling (GPT-4.1-mini) against Duffel's flight-search API (sandbox), answering multi-step pricing questions through a chained tool-calling loop instead of hardcoded data. (github.com/mcglenn07/lipad-ai)
- **Batas AI:** Built a Philippine-law chatbot that grounds every answer in live web search instead of the model's training data, enforces a no-invented-citations rule, and shows parsed source links with each answer, targeting hallucinated citations in legal Q&A. (github.com/mcglenn07/batas-ai)

- **Doktrina:** Built a case-digest generator that pulls Philippine Supreme Court decisions from official sources and outputs a structured digest. Wrote a scraper that uses selective SSL verification to handle the government e-library's broken certificate chain, and tuned the prompt to keep exact doctrinal language. (github.com/mcglenn07/doktrina)

Professional Experience

GRAVITY WIZ, Technical Support Specialist

12/2024–06/2026

- **Production Debugging:** Resolved support tickets for 1,000+ customers across the Gravity Wiz product suite by debugging WordPress, PHP, and Gravity Forms issues in customers' live environments, restoring functionality and minimizing downtime.
- **Root-Cause Analysis:** Traced issues across plugin conflicts, caching layers, and custom code to their root cause, so customers and engineering could put reliable, long-term fixes in place.
- **Cross-functional Collaboration:** Partnered with engineering to reproduce software defects, document technical findings, and validate product fixes.
- **Backlog & Documentation:** Maintained a zero-ticket support backlog through prioritization and timely customer communication, and updated product documentation for customers.
- **Integrations & Client Delivery:** Helped customers implement advanced workflows using Gravity Wiz products, Gravity Forms, APIs (including API Alchemist), payment gateways, and third-party plugins, maintaining a 90%+ customer satisfaction rating.

GRAVITY PDF, Software Engineer / Project Manager

07/2019–12/2024

- **Requirements to Deployment:** Delivered 100+ custom Gravity PDF projects, running technical discovery with clients and translating their requirements into document automation solutions through implementation and deployment.
- **Stakeholder Engagement:** Managed multiple client projects at once, coordinating with developers and stakeholders to deliver on schedule.
- **PDF Generation Troubleshooting:** Investigated and resolved complex PDF generation, template, and implementation issues, helping clients deploy their document automation solutions.

Tangalin Web Developer, Entrepreneur

06/2018–Present

- **Developer/WordPress:** Built and maintained WordPress websites and Unbounce landing pages for small-business clients, handling page layout, custom styling, and deployment.
- Since 06/2026: Self-directed transition into AI & LLM engineering while continuing freelance WordPress work.

Education, Certifications, Credentials

BACHELOR OF SCIENCE, COMPUTER ENGINEERING, Lorma Colleges, Magna Cum Laude

- CAPSTONE: Document Tracking System for the Provincial Government (AngularJS)
