Professional Summary

Software engineer with 7+ years of WordPress/PHP development and technical support experience. Delivered 100+ custom Gravity PDF projects and supported 1,000+ customers. Now building Python applications using retrieval-augmented generation, OpenAI function calling, and MCP, including an evaluated Philippine-law assistant and a WordPress diagnostics server.

Technical Skills

Languages & Databases: Python, PHP, JavaScript, HTML, CSS, MySQL, PostgreSQL.

Applied AI: OpenAI API (function calling, embeddings, Structured Outputs), RAG with pgvector, retrieval and LLM-judge evaluation, Model Context Protocol (MCP), Groq, Gradio, Claude Code.

WordPress & Platforms: WordPress plugin development, Gravity Forms, Gravity PDF, WooCommerce, Elementor, Divi, Shopify, Unbounce, Supabase (Postgres, Google OAuth).

Tools & Practices: Git, WP-CLI, REST API integrations, Xdebug, web scraping (BeautifulSoup), ClickUp, debugging and root-cause analysis, production troubleshooting.

Selected Independent Projects

RA 9262 Assistant (RAG) | Live demo | GitHub

- Built a retrieval-augmented assistant over the Philippine Anti-VAWC Act (RA 9262) and its 2004 implementing rules: section-based chunking, OpenAI embeddings in pgvector (Supabase), a hand-verified 59-pair law-to-rules crosswalk, and section-cited answers whose citations are filtered against the retrieved sections.
- Evaluated on 52 questions (model-drafted from the source text, each checked by me against the PDF): the expected section was in the top 5 for 42 of 45 answerable questions, and 7 of 7 out-of-scope questions were refused. These are retrieval and refusal results on this set, not answer accuracy.
- Documented known failures in the README, including a follow-up question where unsupported answer text remained after citation filtering. Deployed on Hugging Face Spaces.

WP Diagnostics MCP | GitHub

- Built a Python MCP server that gives an AI assistant seven WP-CLI-backed tools: plugin and PHP/WordPress info, debug-log tailing, a SELECT-only SQL tool, and Gravity Forms error-entry and add-on-log tools.
- Runs against a local WordPress installation (Local by Flywheel); a shared helper handles Local's per-site PHP and MySQL socket setup. Local-only, and the SQL filter is a basic guard rather than a security boundary.

Resume Autofill for Gravity Forms | GitHub

- Built a Gravity Forms add-on (PHP, JavaScript) that parses an uploaded PDF or DOCX resume with OpenAI Structured Outputs against a strict JSON schema and autofills the mapped fields for the applicant to review.
- Added applicant consent, encrypted API-key storage, a per-IP daily rate limit, and prompt instructions to treat resume text as untrusted. Documented limits: text-field mapping only; image-only PDFs unsupported.

Bar Quiz Tool | Live app

- Built a multi-user bar-exam practice app (Next.js, Supabase Postgres, Google sign-in, per-user progress). Multiple choice is auto-graded; written answers are graded by an LLM (gpt-oss-120b via Groq) against the reviewer's suggested answer.
- Wrote a Python extraction pipeline and a page-coverage audit script for four reviewer PDFs, with filters for recurring errors (misplaced question splits, page noise). Used by a small group preparing for the bar.

Professional Experience

Gravity Wiz, Technical Support Specialist **12/2024–06/2026**

- Resolved support tickets for 1,000+ customers across the Gravity Wiz product suite by debugging WordPress, PHP, and Gravity Forms issues in customers' live environments, restoring functionality and minimizing downtime.
- Traced issues across plugin conflicts, caching layers, and custom code to their root cause, and partnered with engineering to reproduce defects, document findings, and validate fixes.
- Maintained a zero-ticket support backlog through prioritization and timely customer communication, and updated product documentation.
- Helped customers implement advanced workflows using Gravity Wiz products, Gravity Forms, APIs (including API Alchemist), payment gateways, and third-party plugins, maintaining a 90%+ customer satisfaction rating.

Gravity PDF, Software Engineer / Project Manager **07/2019–12/2024**

- Delivered 100+ custom Gravity PDF projects, running technical discovery with clients and translating their requirements into document automation solutions through implementation and deployment.
- Managed multiple client projects at once, coordinating with developers and stakeholders to deliver on schedule.
- Investigated and resolved complex PDF generation, template, and implementation issues for clients.

Freelance Web Developer, Self-Employed **06/2018–Present**

- Built and maintained WordPress websites and Unbounce landing pages for small-business clients: page layout, custom styling, and deployment.
- Since 06/2026: self-directed work on the independent applied-AI projects above, alongside continued freelance WordPress work.

Education

Bachelor of Science in Computer Engineering, Lorma Colleges, Magna Cum Laude

- Capstone: Document Tracking System for the Provincial Government (AngularJS)
